

Task 9 Rotational Symmetry of the Cube

- In a new 3D Graphics view, use the Cube tool  in the  toolbox to create a cube ABCDEFGH. Change its colour to yellow. Hide the axes and the base plane.
- Use the Point tool  to create two points I and J on the top and bottom of the cube respectively. Colour them in red.
- Use the Line tool  to draw a line through I and J.
- Activate the Graphics view. Drag it to the position and size it according to the figure below. Hide the axes.
- In the Graphics view, create a slider of angle α from 0° to 360° with increment 1° .
- Use the View in front of tool  in the Transformation  toolbox. Click on the cube **a** (in the Algebra view), the line and enter “ α ” as the angle of rotation.
- Make the original cube transparent. Colour the rotated cube in “Light Blue”.
- Explore the rotational symmetry of the cube by dragging the red points I and J to different positions.

Use the View in front of tool  in the  toolbox to explain the number of folds of the symmetry.
