

b)

Für die Koordinaten von  $B_n$  gilt:

$$x = 3 - 4 \cos \varphi \quad (\text{I})$$

$$y = \sin^2 \varphi + 2 \quad (\text{II})$$

$$\text{I: } 4 \cos \varphi = 3 - x$$

$$\cos \varphi = \frac{3}{4} - \frac{1}{4}x$$

$$\sqrt{1 - \sin^2 \varphi} = 0,75 - 0,25x$$

$$1 - \sin^2 \varphi = 0,75^2 - 0,375x + 0,0625x^2$$

$$\sin^2 \varphi = -0,0625x^2 + 0,375x + 0,4375$$

in (II)

$$\Rightarrow y = -0,0625x^2 + 0,375x + 2,4375$$

$$c) \vec{OA} = \begin{pmatrix} 4 \\ -1 \end{pmatrix}; \vec{OB}_h = \begin{pmatrix} 3 - 4 \cos \varphi \\ \sin^2 \varphi + 2 \end{pmatrix}$$

$$A = \frac{1}{2} \cdot \begin{vmatrix} 4 & 3 - 4 \cos \varphi \\ -1 & \sin^2 \varphi + 2 \end{vmatrix} \text{ FE}$$

$$= \frac{1}{2} (4(\sin^2 \varphi + 2) - (-1) \cdot (3 - 4 \cos \varphi)) \text{ FE}$$

$$= \frac{1}{2} (4 \sin^2 \varphi + 8 + 3 - 4 \cos \varphi) \text{ FE}$$

$$= (2 \sin^2 \varphi + 5,5 - 2 \cos \varphi) \text{ FE}$$

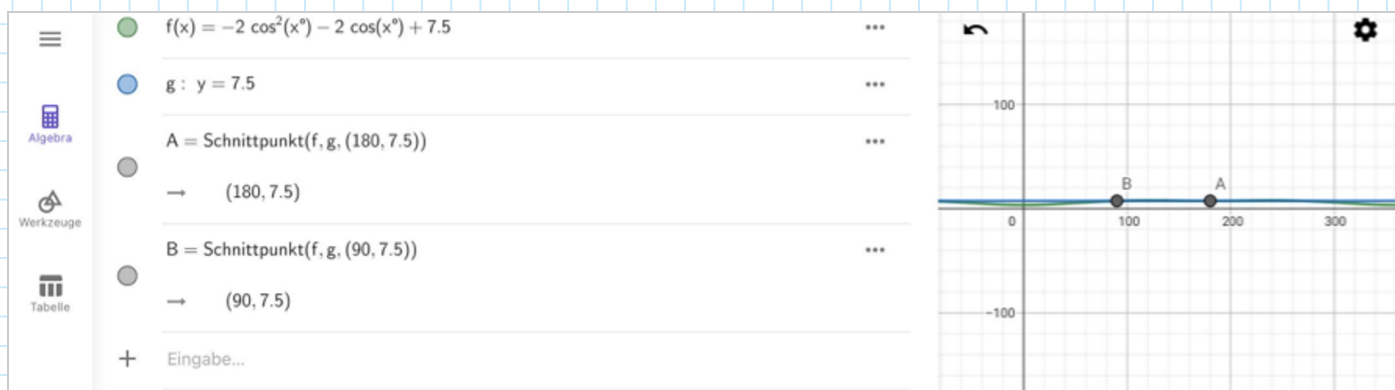

$$= (2 \cdot (1 - \cos^2 \varphi) + 5,5 - 2 \cos \varphi) \text{ FE}$$

$$= (-2 \cos^2 \varphi - 2 \cos \varphi + 7,5) \text{ FE}$$

$$d) (-2 \cos^2 \varphi - 2 \cos \varphi + 7,5) \text{ FE} = 7,5 \text{ FE}$$

$$-2 \cos^2 \varphi - 2 \cos \varphi = 0$$

Gür:

$$\varphi_1 = 90^\circ \quad \wedge \quad \varphi_2 = 180^\circ$$

$$e) \quad x_B = 0 \quad (\Rightarrow) \quad 3 - 4 \cos \varphi = 0$$

$$\frac{3}{4} = \cos \varphi$$

$$\Rightarrow \quad \varphi = 41.41^\circ$$
