<p><b>DESCRIPTION</b></p> <p>Each student gets a floor plan with different calculations on it. The goal here is to calculate the given examples and build a Logifaces construction with a smooth surface.</p> <p>The result of the calculations shows which element needs to be placed in any given triangle, using the standard coding of the blocks. For example when the result of the calculation is 123, block 123 belongs to the triangle. The orientation of the blocks is not given, they should be placed so that the result is a smooth surface.</p>
